

A Checklist of Somerset Birds

The Somerset List to the end of 2014 contains 357 species. Using the BOURC classification 336 are in Category A, 18 in B and three in C. Golden Pheasant has been removed from the list as it is considered that there never was a self-sustaining population in Somerset.

An explanation of the BOUC classification is given below.

A Species that have been recorded in an apparently natural state at least once since 1 January 1950.

B Species that have been recorded in an apparently natural state at least prior to 31 December 1949, but have not been recorded subsequently.

C1 Naturalized introduced species - species that have occurred only as a result of introduction, e.g. Egyptian Goose *Alopochen aegyptiacus*

C2 Naturalized established species – species with established populations resulting from introduction by Man, but which also occur in an apparently natural state, e.g. Greylag Goose *Anser anser*

C3 Naturalized re-established species – species with populations successfully re-established by Man in areas of former occurrence, e.g. Red Kite *Milvus milvus*.

C4 Naturalized feral species – domesticated species with populations established in the wild, e.g. Rock Pigeon (Dove)/Feral Pigeon *Columba livia*

C5 Vagrant naturalized species – species from established naturalized populations abroad, e.g. possibly some Ruddy Shelducks *Tadorna ferruginea* occurring in Britain. There are currently no species in category C5.

C6 Former naturalized species - species formerly placed in C1 whose naturalized populations are either no longer self-sustaining or are considered extinct, e.g. Lady Amherst's Pheasant *Chrysolophus amherstiae*.

D Species that would otherwise appear in Category A except that there is reasonable doubt that they have ever occurred in a natural state. Species placed in Category D only form no part of the British List, and are not included in the species totals.

E Species recorded as introductions, human-assisted transportees or escapees from captivity, and whose breeding populations (if any) are thought not to be self-sustaining. Species in Category E that have bred in the wild in Britain are designated as E*. Category E species form no part of the British List (unless already included within Categories A, B or C).

The table below also gives the reporting status against the species that are classed as requiring either County or National submissions. SOSRC (F) requires full description and SOSRC (S) short notes, whereas BBRC requires submission to the British Birds Rarity Committee. The SOSRC submissions form can be found [here](#).
